

E11 Lecture 8: C – never enough!

Profs. David Money Harris & Sarah Harris

Fall 2011

Outline

- Timing
- Multi-dimensional arrays
- Testing the limits
- Programming Practice
- Nuts and bolts
 - Multiple files
 - other C files
 - #include
 - Other useful functions

Timing

- `delay(time)`
 - delays for time ms until continuing execution
- `delayMicroseconds(time)`
 - delays for time us until continuing execution
- `millis()`
 - returns time since program started in ms
 - returns unsigned long
- `micros()`
 - returns time since program started in us
 - returns unsigned long

Timing: frequency

```
// This program turns the red led on for about 1 second,  
// then turns it off for about 1 second.  
  
#define REDLED 13  
  
void setup()  
{  
  Serial.begin(9600); // set up Serial communication speed  
  pinMode(REDLED, OUTPUT); // red led is output  
}  
  
void loop()  
{  
  Serial.println("Starting loop\n");  
  digitalWrite(REDLED, HIGH); // turn red LED on  
  delay(1000);  
  digitalWrite(REDLED, LOW); // turn red LED off  
  delay(1000);  
}
```

Timing: measuring time

```
// This program turns the red led on for about 1 second,  
// then turns it off for about 1 second.  
  
#define REDLED 13  
  
void loop() {  
    unsigned long startTime, endTime;  
  
    startTime = millis();  
    Serial.println("Starting loop\n");  
    endTime = millis();  
    Serial.print("Elapsed time to print:"); Serial.println(endTime-  
startTime);  
  
    digitalWrite(REDLED, HIGH); // turn red LED on  
    delay(1000);  
    digitalWrite(REDLED, LOW); // turn red LED off  
    delay(1000);  
}
```

Example: ~4Hz sampling

This code reads the distance sensor roughly every 250 ms (sampling frequency = 4 Hz) and prints out the reading.

```
#define DISTSENSOR 14

void setup() {
  Serial.begin(9600);
  // set up Serial communication speed
  pinMode(DISTSENSOR, INPUT); // distance sensor as input
}

void loop()
{
  int reading;

  reading = analogRead(DISTSENSOR-14);
  Serial.print("Reading: "); Serial.println(reading);
  delay(250);
}
```

Example: 4Hz sampling

The following code reads the distance sensor 100 times exactly every 250 ms.

```
#define ARRAYSIZE 100
int distData[ARRAYSIZE]; // global array holding distance data

void readDistData()
{
    unsigned long time;
    int i;

    time = millis(); // time at start of function in ms

    // record distance sensor data
    // sampling time = 250 ms (sampling rate = 4 Hz)
    for (i=0; i<ARRAYSIZE; i++) {
        // read analog port
        distData[i] = analogRead(DISTSENSOR-14);
        while (millis() < (time + (i+1)*250))
            ; // pause until time to read again
    }
}
```

Even better!

Write code that reads the distance sensor exactly every 250 ms.

```
void readDistData(){
    unsigned long time1, time2;
    int i;

    time1 = millis(); // time at start of function in ms

    // record distance sensor data
    // sampling time = 250 ms (sampling rate = 4 bits/second)
    for (i=0; i<ARRAYSIZE; i++) {
        distData[i] = analogRead(DISTSENSOR-14); // read analog port
        while (millis() < (time1 + (i+1)*250))
            ; // pause until time to read again
    }
    time2 = millis()-time1;
    Serial.print("Time to execute loop: "); Serial.println(time2);
}
```

Multi-dimensional Arrays

```
int grades[10][8];
```

Multi-dimensional Arrays

```
int grades[10][8];
```

	PS 1	PS 2	PS 3	PS 4	PS 5	PS 6	PS 7	PS 8	
Riley									0
Mary									1
Jinsun									2
Karl									3
Eric									4
Senja									5
Javier									6
Alice									7
Peter									8
Rama									9
	0	1	2	3	4	5	6	7	

Multi-dimensional Arrays

```
int grades[10][8];

// initialize all entries in array to 0
int i, j;

for (i=0; i<10; i++)
    for (j=0; j<8; j++)
        grades[i][j] = 0;
```

Multi-dimensional Arrays

```
// initialize array at declaration
int grades[10][8] =
    { {100, 107, 99, 101, 100, 104, 109, 117},
      {103, 101, 94, 101, 102, 106, 105, 110},
      {101, 102, 92, 101, 100, 107, 109, 110},
      {114, 106, 95, 101, 100, 102, 102, 100},
      {98, 105, 97, 101, 103, 104, 109, 109},
      {105, 103, 99, 101, 105, 104, 101, 105},
      {103, 101, 100, 101, 108, 105, 109, 100},
      {100, 102, 102, 101, 102, 101, 105, 102},
      {102, 106, 110, 101, 100, 102, 120, 103},
      {99, 107, 98, 101, 109, 104, 110, 108} };
```

Multi-dimensional Arrays

```
// get the mean for a problem set and overall
for (i=0; i<8; i++) {          // for each of the 8 problem sets
    total_tmp = 0;
    for (j=0; j<10; j++) {
        total_tmp += grades[j][i]; // calculate sum of scores
    }
    mean_ps[i] = total_tmp/10;    // calculate p.s. mean
    Serial.print("Problem Set "); Serial.print(i+1);
    Serial.print(": "); Serial.println(mean_ps[i]);

    mean_overall += total_tmp;    // sum all the scores
}
mean_overall = mean_overall/(10*8); // calculate overall mean
Serial.print("Overall mean:"); Serial.println(mean_overall);
```

Testing the Limits

- **Atmega328**
 - Program memory: 32 KB of Flash Memory (retains value when powered off)
 - Data memory: 2 KB of static random access memory (SRAM) (loses value when powered off)

Data memory: 2 KB

- How big of an int array can I declare?
 - $2048 \text{ Bytes} / (2 \text{ Bytes/element}) = 1024\text{-element array}$
 - But also other data (bootloader, Serial library data, etc.) – so can't use entire 2 KB.

Data memory: 2 KB

- How big of an int array can I declare?
 - $2048 \text{ Bytes} / (2 \text{ Bytes/element}) = 1024\text{-element array}$

```
// datalimit.pde - 19 September 2011
// Sarah Harris - sarah_harris@hmc.edu
// testing limits on data

#define SIZE 800

int array[SIZE]; // vary array size to see what happens

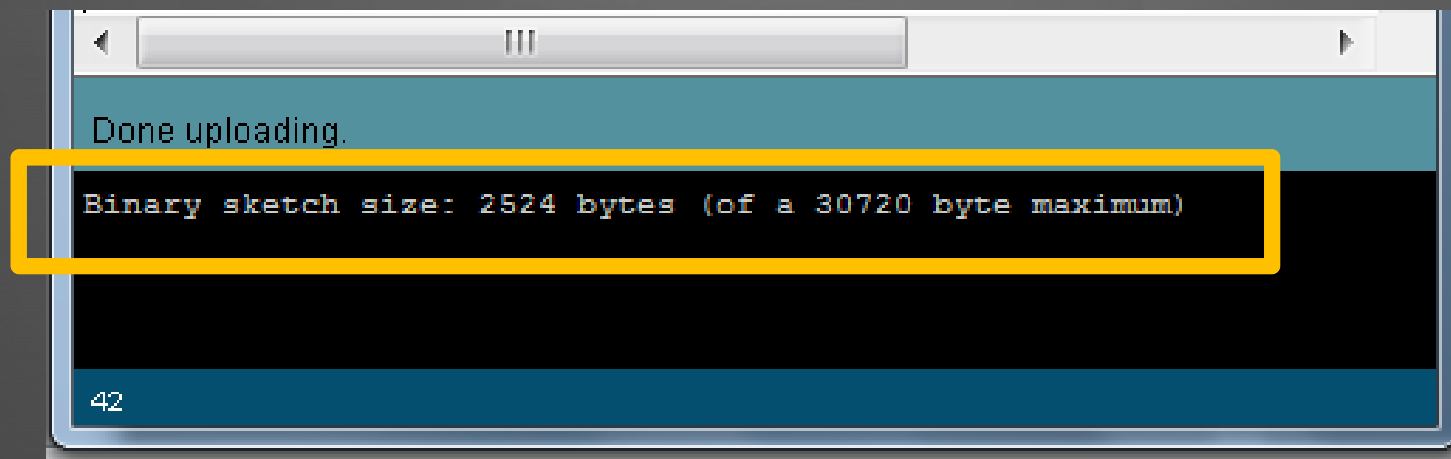

void setup() {
  int i;

  Serial.begin(9600);  Serial.println("Starting program...");

  for (i = 0; i < SIZE; i++) {
    array[i] = random(0,101);
    Serial.println(array[i]);
  }
}
```

Program memory: 32 KB

- How big can program be?
 - Many instructions – can look at size when compiling or uploading
 - Some of it used by bootloader (1/2 KB)
 - Some used by libraries (like Serial library)

A screenshot of an IDE terminal window. The window has a title bar with a hamburger menu icon. The terminal text shows "Done uploading." followed by "Binary sketch size: 2524 bytes (of a 30720 byte maximum)" which is highlighted with a yellow box. At the bottom left of the terminal, the number "42" is visible.

```
Done uploading.  
Binary sketch size: 2524 bytes (of a 30720 byte maximum)  
42
```

Outline

- Timing
- Multi-dimensional arrays
- Testing the limits
- Programming Practice
- Nuts and bolts
 - Multiple files
 - other C files
 - #include
 - Other useful functions

Programming Practice

- How do you approach writing a program?

Programming Practice

- How do you approach writing a program?
- Before you sit in front of a computer:
 - Write down the steps of the program (in English)
 - Start with major steps, then break them down into smaller steps
- Work on one step at a time
 - Write code (using functions – modularity!)
 - Test that small piece of code thoroughly
 - Then move on to the next step

Nuts and Bolts: Multiple Files

- Enables:
 - organization
 - code reuse

Multiple Files in a Single Sketch

- For example, you may have a group of functions that you consistently use.
- By adding the .pde file to the sketch, you can use any of the functions.
- Be sure you only have extra functions in your added .pde – not `setup()` or `loop()`.

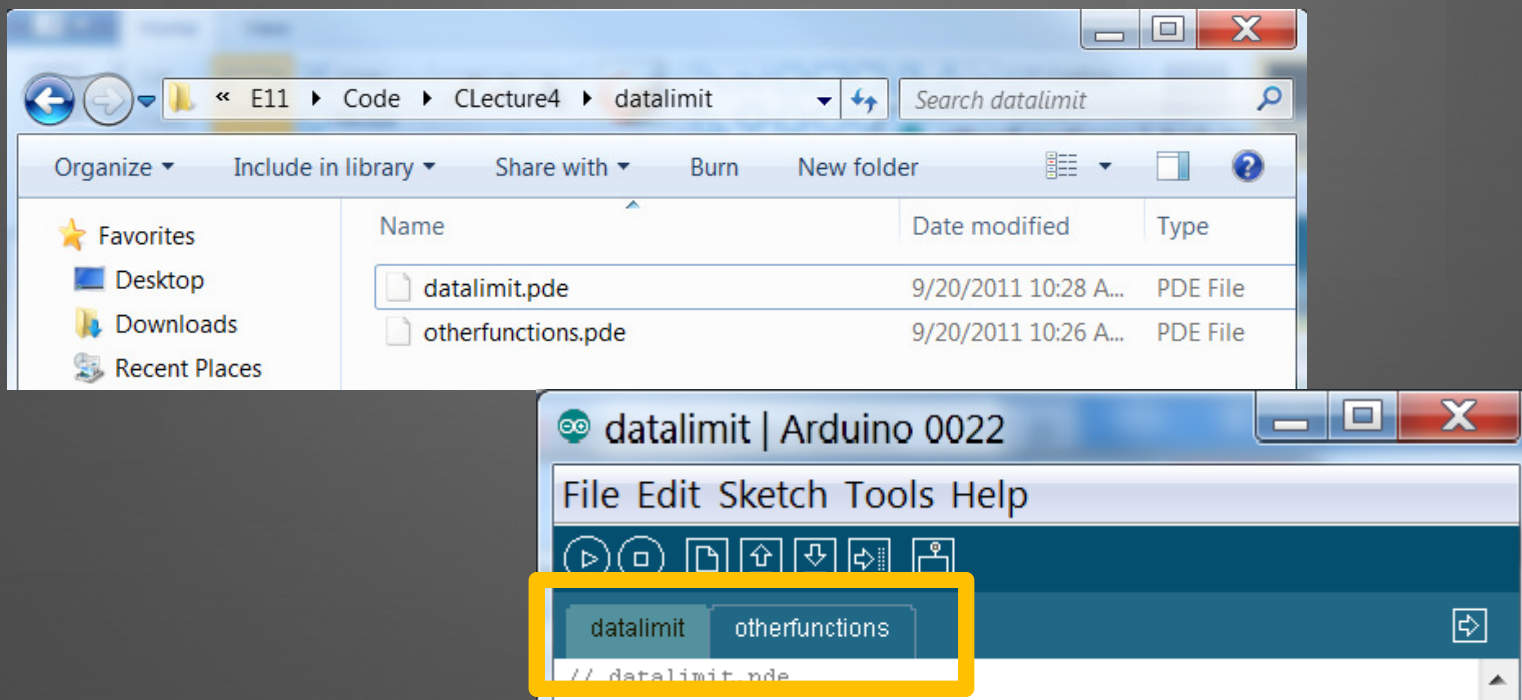

Multiple Files in a Single Sketch

```
// otherfunctions.pde
void printArray(int array[], int length)
{
...
}

int getKeyPress()
{
...
}
```

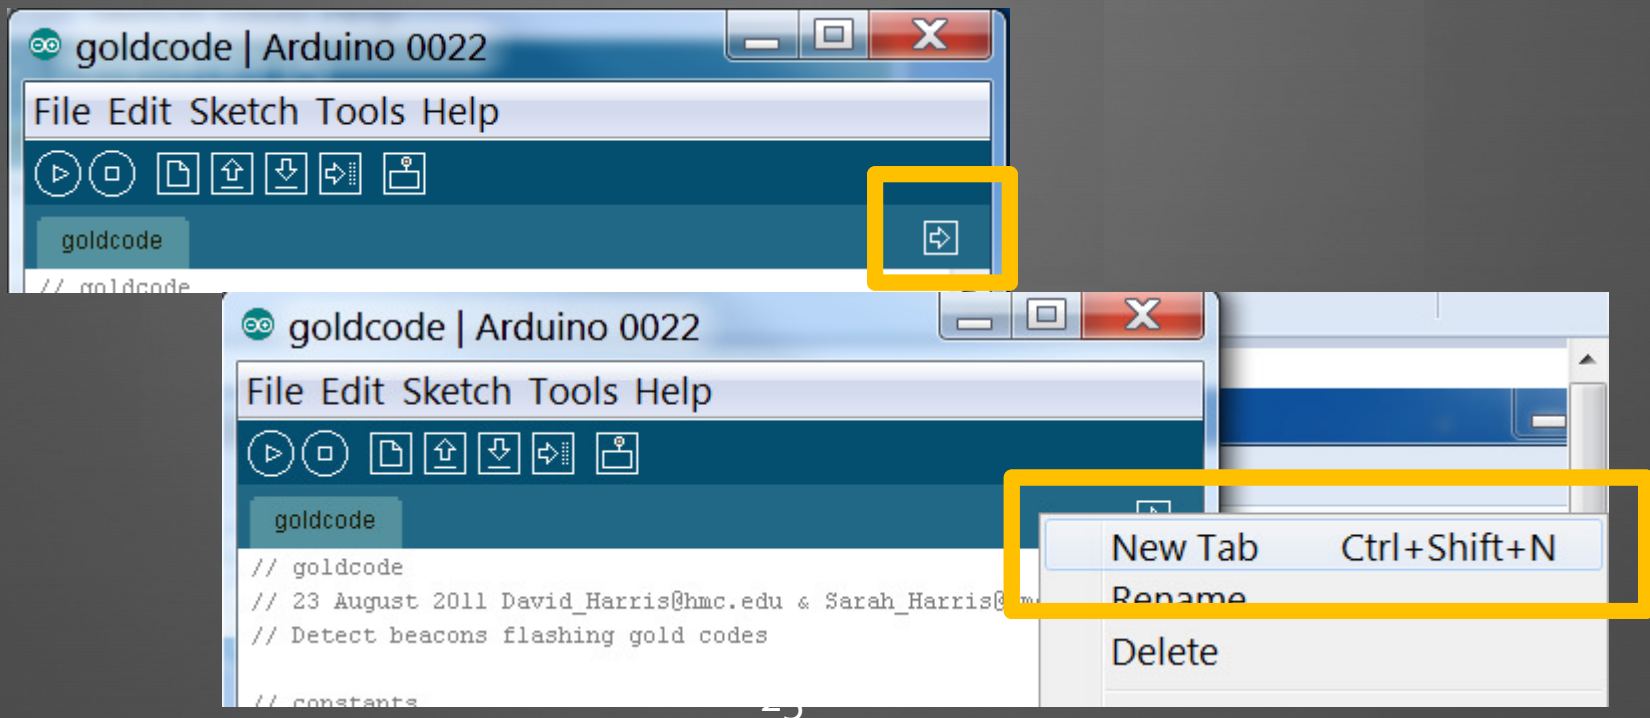

Multiple Files in a Single Sketch

- How to do this – two ways:
 1. Place extra .pde file in the sketch folder. (Now it will show up as a tab in the sketch, and you can use the functions.)

Multiple Files in a Single Sketch

- How to do this – two ways:
 1. Add a new tab from the menu.
 2. Add a tab yourself manually and type in the functions in that tab.

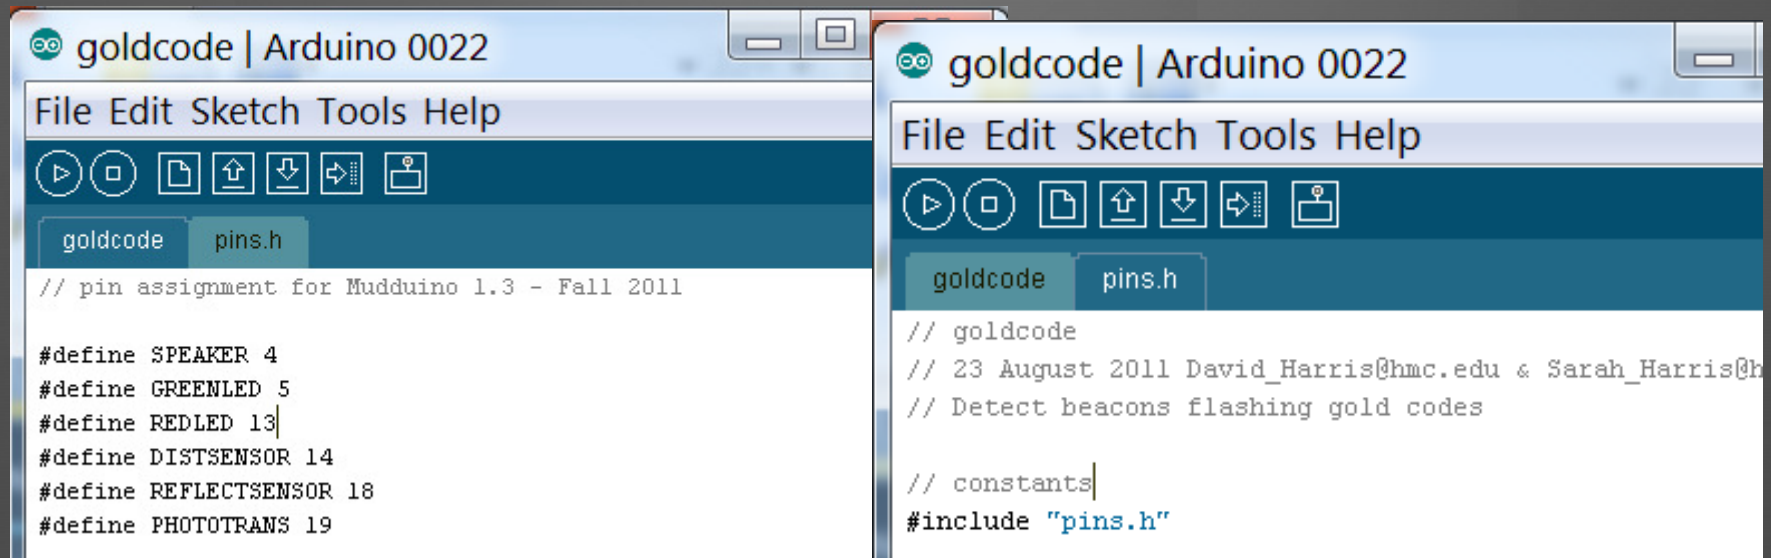

Multiple Files in a Single Sketch

- Remove the file from the sketch by simply removing it from the sketch folder manually.

Multiple Files in a Single Sketch

- Or you may have some #defines that you consistently use.
 1. Add new tab
 2. Name it with a “.h” extension. For example, pins.h
 3. Place this line in .pde file: #include “pins.h”

The image shows two side-by-side screenshots of the Arduino IDE interface. The left screenshot shows the 'pins.h' file being edited, containing several #define statements for pin assignments. The right screenshot shows the main sketch file being edited, with the #include directive added to include the 'pins.h' file.

```
goldcode | Arduino 0022
File Edit Sketch Tools Help
goldcode pins.h
// pin assignment for Mudduino 1.3 - Fall 2011

#define SPEAKER 4
#define GREENLED 5
#define REDLED 13
#define DISTSENSOR 14
#define REFLECTSENSOR 18
#define PHOTOTRANS 19
```

```
goldcode | Arduino 0022
File Edit Sketch Tools Help
goldcode pins.h
// goldcode
// 23 August 2011 David_Harris@hmc.edu & Sarah_Harris@h
// Detect beacons flashing gold codes

// constants
#include "pins.h"
```

Some other useful functions

<http://arduino.cc/en/Reference/HomePage>

- `abs(var)` – returns the absolute value of `var`

- Example:

```
int y = -20;  
int x = abs(y); // x = 20
```

- `min(x, y)` – returns the minimum of `x` or `y`

- Example:

```
int x = 4;  
int y = 2;  
int minimum = min(x, y); // minimum = 2
```

- casting characters: `char(x)`, `int(x)`, `long(x)`, `float(x)`

- Casts `x` to the corresponding type

- Example:

```
char x = 2;    // x is a 1-byte data type: 00000010  
int y = int(x); // y is a 2-byte data type: 00000000 00000010
```
