Lab 3 Specifications

Lab-specific Specifications

Proficiency

- \Box Circuit correctly reads inputs from 4×4 keypad.
- \Box Dual seven-segment display shows the last two hexadecimal digits pressed.
- \Box Most recent numeric entry is shown on the right.
- □ Design does not lock up when multiple buttons are pressed at once. (i.e., it just holds the current values on the display and functions properly again when the buttons are released.)
- □ Design only registers first button press if additional buttons are pressed down while holding down one button.
- \Box Each button press registered only once (e.g., no switch bouncing)
- □ Seven segment displays are same brightness regardless of how many segments are illuminated.
- \Box Design has no latches.
- \Box Design has no tristate buffers.
- \Box Report includes state transition diagram illustrating the operation of the system.

Excellence

- □ Design uses synchronizers on asynchronous inputs to mitigate metastability.
- \Box Keypad and seven-segment display are aligned in the same orientation (i.e., the top of the numbers on both are facing the same direction).
- □ State transition diagram is completely specified (i.e., all transitions between states are specified, output conditions specified in each state)
- □ Report includes state transition table to document the nextstate and output values for each state based on the current state and inputs.
- □ Report explains tradeoffs between the chosen design decisions and alternatives (e.g., why did you select a certain switch debouncing strategy and what are the tradeoffs between your chosen method and others?).

General Specifications

Proficiency

General Schematic Specifications

- $\hfill\square$ All pin names labeled
- \Box All pin numbers labeled
- \Box Crossing wires clearly identified as junction or unconnected
- \Box Neat layout (e.g., clear organization and spacing)
- \Box All parts labeled with part number
- \Box All component values present

Block Diagram

- □ Block diagram present with one block per SystemVerilog module
- \Box Each block includes all input and output signals

HDL & Code Specifications

General Formatting

- □ Descriptive filename (e.g., lab2_jb.sv)
- \Box Descriptive variable names
- □ Neat formatting (e.g., standard indentation, consistent formatting for variable names (kebab-case/snake_case/camelCase/PascalCase))
- \Box Descriptive and clear function/module names

Comments

 \Box Comments to indicate the purpose of each function/module

Lab Writeup/Summary

- \Box Brief (e.g., 3-5 sentence) description of the main goals of the assignment and what was done.
- □ Explanation of design approach. How did you go about designing and implementing the design?
- □ Explanation of testing approach. How did you verify your design was behaving as expected?
- \Box Statement of whether the design meets all the requirements. If not, list the shortcomings.
- \Box Number of hours spent working on the lab are included.
- □ Writeup contains minimal spelling or grammar issues and any errors do not significantly detract from clarity of the writeup.
- \Box (Optional) List comments or suggestions on what was particularly good about the assignment or what you think needs to change in future versions.

Excellence

General Schematic Specifications

- \Box Standard symbols used for all components where applicable
- \Box Signals "flow" from left to right where possible (e.g., inputs on left hand side, outputs on right hand side)
- $\Box\,$ Title block with author name, title, and date

HDL & Code Specifications

General Formatting

- \Box Name, email, and date at the top of every file
- \Box Comment at the top of each source code file to describe what is in it
- □ Clear and organized hierarchy (e.g., deliniation between top level modules and submodules)

Test benches

- \Box Testbenches written for each individual module to demonstrate proper operation
- \Box Testbench output included in the report

Lab Writeup/Summary

 \Box Writeup is free of spelling and grammar issues
