To Charge LiPo Batteries

1. Connect the battery to the charger. For the 1 cell batteries (130 mAh & 1000 mAh) just connect the battery to the Black and Red leads. The 130 mAh needs the adapter to the small connector. Make sure to connect in the correct orientation. For the 2 cell batteries (300 mAh) connect both to the Black and Red leads and to the white balance connector (says XH adaptor on it).

2. Plug in the charger. Play with the buttons until it displays
   > LiPo Charge
   > X.X A   AUTO

   For the 130 mAh battery, X.X = 0.1
   For the 300 mAh battery, X.X = 0.3
   For the 1000 mAh battery, X.X = 1.0

3. Place the battery in the LiPo Guard bag.

4. Press and hold the Start button until
   > Battery Check
   > Wait…

   appears, and then release.

5. Wait a few seconds to make sure the charger has detected the correct battery type and is starting to charge.

6. When the battery is charged, the charger will briefly make a sound, and FULL will flash on the display.

7. Press the STOP button and disconnect the battery. If you won't be using the charger for a while, unplug it.
