

# Sensors and Transducers

Qimin Yang  
E80– Spring 2011

# Agenda

- ▶ Rocket sensors
- ▶ Common sensors/transducers
  - Gas Sensor
  - Humidity Sensor
  - Pressure Sensor
  - Vibration Sensor
- ▶ Rocket hardware (next week)

# Why sensors on rocket?

You get to choose sensors for your rocket!

<http://www.eng.hmc.edu/NewE80/FlightVideos.html>

[http://www.eng.hmc.edu/NewE80/  
Mudd11\\_10\\_06-800Kbps.mov](http://www.eng.hmc.edu/NewE80/Mudd11_10_06-800Kbps.mov)

# Desired Data from Rockets

- ▶ Rocket inside/outside environment
  - Temperature
  - Humidity
  - Pressure
- ▶ Motion of the rocket
  - Altitude / Apogee time
  - Rate Gyros and Acceleration (translational, rotational)
- ▶ Vibration of the rocket
- ▶ Vibration of the stand (last year E80)

# Common Transducers

- ▶ Temperature Sensor (Done)
- ▶ Rate Gyro / Accelerometer sensors (Done)
- ▶ Gas Sensor
- ▶ Humidity Sensor
- ▶ Pressure Sensor / Altimeter
- ▶ Vibration Sensor

# Gas / Chemical Sensors

- ▶ Solid State electrolyte
- ▶ Metal Oxide
- ▶ Catalytic-based sensors
- ▶ Electro-Chemical (chemiresistive)

[http://www.futurlec.com/Gas\\_Sensors.shtml](http://www.futurlec.com/Gas_Sensors.shtml) (output voltage)

[http://www.ipm.fraunhofer.de/fhg/Images/metallsensor-eng\\_tcm180-16346.pdf](http://www.ipm.fraunhofer.de/fhg/Images/metallsensor-eng_tcm180-16346.pdf) (output resistance)

<http://www.synkera.com/chemical-sensing-analysis/solid-state-gas-sensors.html> (output resistance)

[http://www.boulder.nist.gov/div853/Publication%20files/NIST\\_BCC\\_Nano\\_Hooker\\_2002.pdf](http://www.boulder.nist.gov/div853/Publication%20files/NIST_BCC_Nano_Hooker_2002.pdf)

- ▶ Sensitivity (ppm, ppb)
- ▶ Operation temperature range
- ▶ Power consumption
- ▶ Size

# Example– CO<sub>2</sub> Gas Sensors

Cathodic reaction:  $2\text{Li} + \text{CO}_2 + \frac{1}{2}\text{O}_2 + 2\text{e}^- = \text{Li}_2\text{CO}_3$

Anodic reaction:  $2\text{Na}^+ + \frac{1}{2}\text{O}_2 + 2\text{e}^- = \text{Na}_2\text{O}$

Overall chemical reaction:  $\text{Li}_2\text{CO}_3 + 2\text{Na} + \text{O}_2 = \text{Na}_2\text{O} + 2\text{Li} + \text{CO}_2$

Nernst's equation:

$$\text{EMF} = E_c - \frac{R \times T}{2F} \ln (P(\text{CO}_2))$$

$P(\text{CO}_2)$ —CO<sub>2</sub> partial Pressure

$E_c$ —Constant cell potential under standard conditions

$R$ —Gas Constant volume, 8.31 volt-coulomb/(mol-K)

$T$ — Absolute Temperature (K)

$F$ —Faraday constant, 96500 coulombs/mol

<http://answers.yahoo.com/question/index?qid=20080928213959AAgl0u6>

# What is Partial Pressure?

Convert Partial Pressure to ppm or to mass per volume

Ideal gas law:

$$PV = nRT$$

n: number of moles

Dalton's Law of Partial Pressure:

Partial pressure ratio = mole ratio

ppm → decimal fraction → multiply by total pressure to get CO<sub>2</sub> partial pressure.

$$PV = nRT = (m/M) * RT$$

→

$$\text{Mass per volume } m/V = P * M / (R * T)$$

M: Molar Mass

## What is Partial Pressure?

Convert to ppm or to mass per volume

An example, 1% CO<sub>2</sub>, 101.325 kPa  
atmospheric pressure, 25 °C (298.15 K)

ppm=?

Partial pressure CO<sub>2</sub> =?

Mass per volume =  $P \cdot M / (R \cdot T) = ?$

## What is Partial Pressure?

Convert to ppm or to mass per volume

An example, 1% CO<sub>2</sub>, 101.325 kPa atmospheric pressure, 25 °C (298.15 K)

$$\text{ppm} = (1 / 100) * 10^6 = 10^4$$

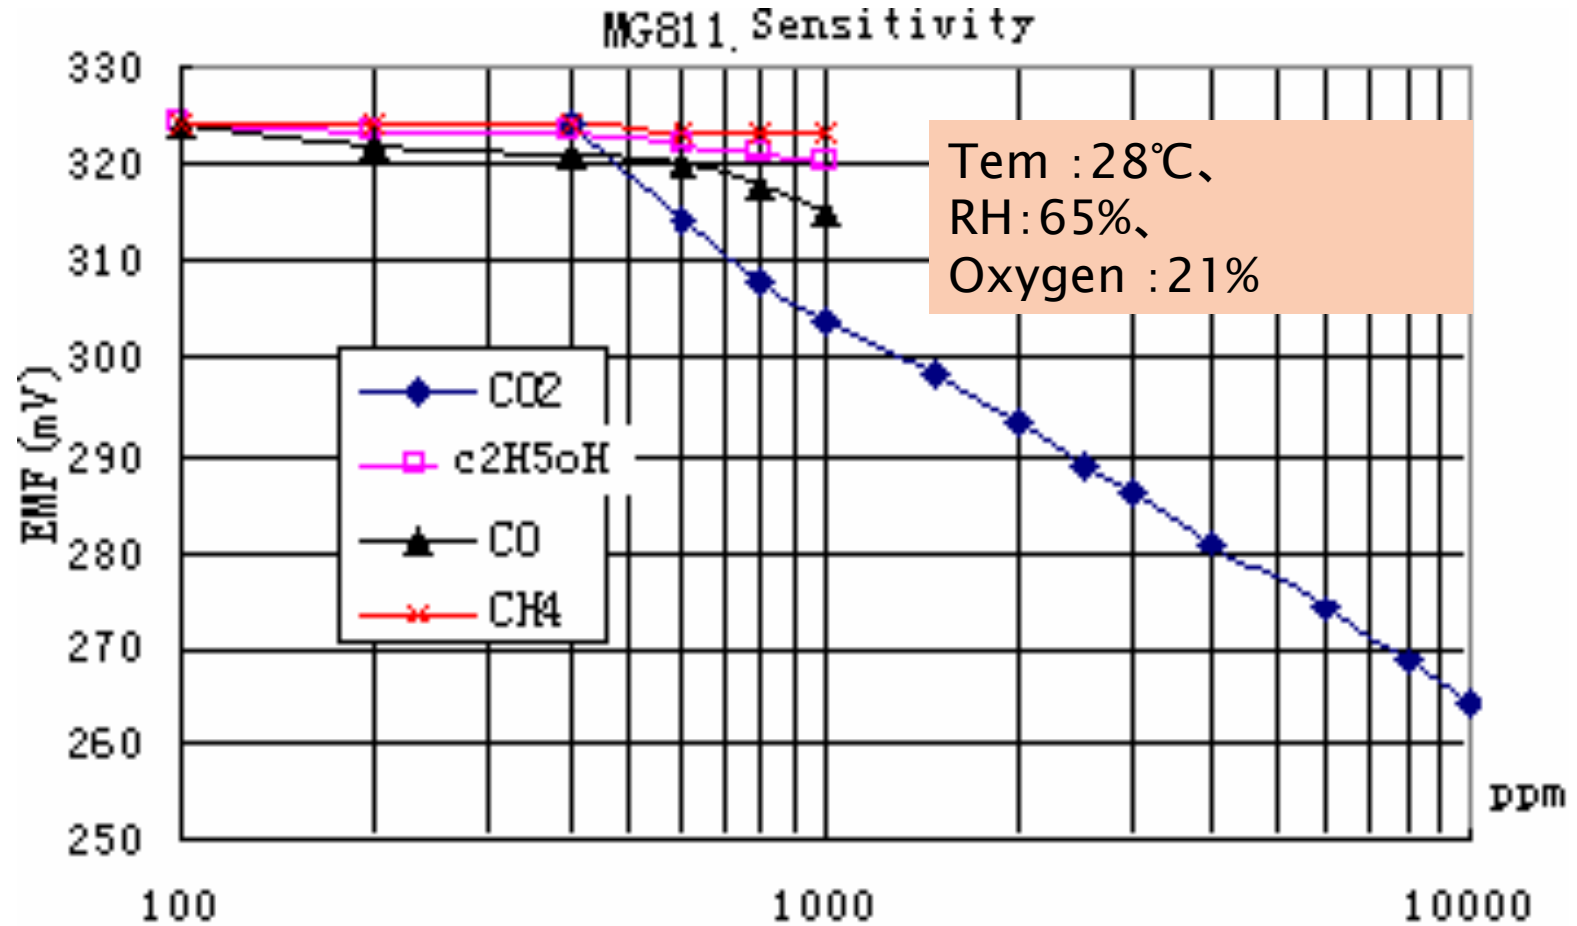

$$\text{Partial pressure CO}_2 = 0.01 * 101.325 \text{ kPa} = 1.01325 \text{ kPa} = 1013.25 \text{ Pa}$$

The gas constant R is 8.314472 m<sup>3</sup> · Pa / (K · mol),  
M = 44 g/mol (for CO<sub>2</sub>)

$$\text{Mass per volume} = P * M / (R * T) = 1013.25 \text{ Pa} * 44 \text{ g/mol} / (298.15 \text{ K} * 8.314472 \text{ m}^3 \cdot \text{Pa} / (\text{K} \cdot \text{mol})) = 18 \text{ g/m}^3$$

# Example Sensor MG811

$$EMF = E_c - (R \times T) / (2F) \ln (P(\text{CO}_2))$$

[http://www.futurlec.com/CO2\\_Sensor.shtml](http://www.futurlec.com/CO2_Sensor.shtml)

<http://www.synkera.com/chemical-sensing-analysis/solid-state-gas-sensors.html>

Let's see how other people did it!

## Gas Sensor Experiment

[http://spacegrant.colorado.edu/COSGC\\_Projects/RockSat-C%202011/2010Pres/CDR/CDR\\_Puerto%20Rico\\_2010.pdf](http://spacegrant.colorado.edu/COSGC_Projects/RockSat-C%202011/2010Pres/CDR/CDR_Puerto%20Rico_2010.pdf)

# Humidity Sensor

## What is humidity (relative humidity)?

$$\phi = \frac{e_w}{e_w^*} \times 100\%$$

$e_w$  : partial pressure of water vapor

$e_w^*$  : saturated vapor pressure of water at a prescribed T

maximum water vapor that the air can hold without condensing

$e_w^* = f(T, P)$  empirically correlation

[http://en.wikipedia.org/wiki/Relative\\_humidity](http://en.wikipedia.org/wiki/Relative_humidity)

<http://en.wikipedia.org/wiki/Hygrometer>

# Humidity Sensor

## Relative humidity measurement (%RH)

- ▶ Capacitor based\*
- ▶ Chemically resistive
- ▶ Calibrated vs. voltage output\*

## ▶ Examples:

<http://media.digikey.com/pdf/Data%20Sheets/Honeywell%20Sensing%20&%20Control%20PDFs/HCH-1000%20Series.pdf>

<http://www.sparkfun.com/datasheets/Sensors/Weather/SEN-09569-HIH-4030-datasheet.pdf>

<http://www.sparkfun.com/datasheets/Sensors/Temperature/HH10D.pdf> (voltage calibrated)

# Humidity Sensor

Capacitive RH sensor:

- ▶ Thin layer of water absorbent
- ▶ Polymer or inorganic material
- ▶ Water's dielectric constant
- ▶ More water → More capacitance?
- ▶ How to measure capacitance?

# Pressure Sensor

- ▶ **What is Pressure?**

  - e.g. 101.325kPa atmospheric pressure at sea level

  - e.g. tire pressure gauge 0 PSI

  - e.g. pressure drop for flow measurement

- ▶ **What kind of pressure measurement?**

  - Absolute Pressure Sensor
  - Gauge Pressure Sensor
  - Differential Pressure Sensor

# Pressure Sensor Principles

## ▶ Force Based–

- Piezo–resistive Strain Gauge
- Potentiometric
- Piezoelectric
- Capacitive
- Electromagnetic
- Optical (gratings)

## ▶ Other kinds–

- Resonance (MEMS)
- Thermal
- Ionization (charged gas particles)

<http://en.wikipedia.org/wiki/Piezoresistive>

<http://www.maxim-ic.com/app-notes/index.mvp/id/871>

# Sensor Example: MPXA6115A

## SMALL OUTLINE PACKAGE

MPXA4115A6U  
CASE 482

MPXA4115AC6U  
CASE 482A

## Features

- 1.5% Maximum Error over 0° to 85°C
- Ideally suited for Microprocessor or Microcontroller-Based Systems
- Temperature Compensated from -40° to +125°C
- Durable Epoxy Unibody Element or Thermoplastic (PPS) Surface Mount Package

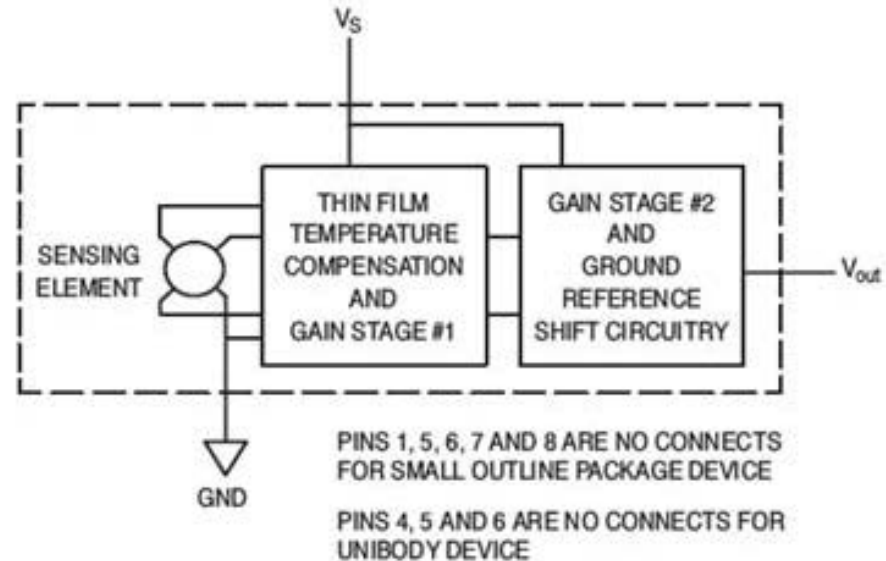

Figure 1. Fully Integrated Pressure Sensor Schematic

<http://shops.eccn.com/freescale/PDFDoc/MPXH6115A6U.pdf>

# Characteristics of pressure sensor:

- **Pressure range:** 15-115 kPa
- **Sensitivity:** 45.9mV/kPa
- **Supply voltage:** 5V
- **Output analog voltage:**
  - Offset voltage ( $V_{off}$ ): output voltage at minimum rated pressure (Typical@ 0.204V)
  - Full scale output ( $V_{fso}$ ): output voltage at maximum rated pressure (Typical@ 4.794 V)
- **Pressure units**
  - Pascal (Pa)=N/m<sup>2</sup>: standard atmosphere  
 $P_0=101325=101.325\text{kPa}$
  - Psi= (Force) pound per square inch: 1 Psi=6.89465 KPa

# Pressure Sensor – Altitude Sensing

\*  $P \cdot V = nRT$  "ideal gas law"

$$\rho = \frac{\text{Mass} = nM}{\text{volume} = \frac{nRT}{P}} = \frac{M \cdot P}{R \cdot T}$$

Method #1:  $\Delta P = -\rho g \cdot \Delta h = -\frac{MP}{RT} g \cdot \Delta h$

Method #2:  $P(h) = P_0 \exp\left(-\frac{Mg}{RT} h\right)$

M: Molar Mass  
n: Number of moles  
T: Temperature  
P: Pressure  
h: Altitude

# Pressure Sensor – Altitude Sensing

# Pressure Sensor – Altitude Sensing

$$h = \frac{T_0}{-\left(\frac{dT}{dh}\right)} \cdot \left[ 1 - \left(\frac{P_0}{P}\right)^{\frac{\left(\frac{dT}{dh}\right)R}{gM}} \right]$$

where

- $h$  = altitude (above sea level) **(in meters)**
- $P_0$  = standard atmosphere pressure = 101.325kPa
- $T_0$  = 288.15K (+15°C)
- $dT/dh = -0.0065$  K/m: thermal gradient or standard temperature lapse rate
- $R$  = gas constant (8.31432 N\*m/mol\*K)
- $g = (9.80665 \text{ m/s}^2)$
- $M$  = molar mass of earth's air (0.0289644 kg/mol )

# Pressure Sensor – Altitude Sensing

Plug in all the constants

Method #3:

$$h = 4.43 \times 10^4 \times \left( 1 - \left( \frac{101.325 \text{ kPa}}{P} \right)^{-0.1902} \right)$$

- h is measured **in meters**.
- Equation calibrated up to 36,090 feet (11,000m).
- Reference: [http://en.wikipedia.org/wiki/Atmospheric\\_pressure](http://en.wikipedia.org/wiki/Atmospheric_pressure)
- Different values of dT/dh for different layers of the atmosphere

# Examples

Suppose,  $P = 85 \text{ kPa}$  (from Pressure sensor)

**Method 1:**

$$\Delta h = -\frac{\Delta P}{\rho g} = -\frac{(85 - 101) \text{ kPa}}{\left(1.2 \frac{\text{kg}}{\text{m}^3} * 9.8 \frac{\text{m}}{\text{s}^2}\right)} = 1.36 \text{ km}$$

**Method 2:**

$$h = -\frac{RT}{Mg} \ln\left(\frac{P}{P_0}\right) = -8440 \ln\left(\frac{85 \text{ kPa}}{101 \text{ kPa}}\right) = 1.46 \text{ km}$$

**Method 3:**

$$h = 4.43 \times 10^4 \times \left(1 - \left(\frac{101.325 \text{ kPa}}{85 \text{ kPa}}\right)^{-0.1902}\right) = 1.43 \text{ km}$$

# Vibration/Impact Sensor

Mechanical Force/ Deformation  
→ resistance/ voltage output

- Strain gauges
- Piezo electric films

<http://www.digikey.com/Scripts/US/DKSUS.dll?Detail&name=MSP1006-ND>

[http://en.wikipedia.org/wiki/Strain\\_%28physics%29](http://en.wikipedia.org/wiki/Strain_%28physics%29)

<http://www.vishaypg.com/micro-measurements/transducer-class-strain-gages/>

<http://www.sparkfun.com/datasheets/Sensors/Flex/MSI-techman.pdf>

# Vibration Sensor

LDT0: Voltage Output vs Tip deflection  
(Figure 2)

[http://www.meas-spec.com/downloads/LDT\\_Series.pdf](http://www.meas-spec.com/downloads/LDT_Series.pdf)

# Vibration Sensor– accelerometers

- ▶ <http://www.sparkfun.com/tutorials/167>
- ▶ <http://www.sparkfun.com/datasheets/Components/General/MMA7361L.pdf>

- ▶ Full–Scale Range
- ▶ Number of Axes
- ▶ Interface (Analog, Digital, Pulse Output)
- ▶ Bandwidth (50–100 Hz)
- ▶ Power Consumption (supply voltage)

# Now what?

- (1) Electronics should fit within rocket
- (2) Easy to transmit/store/retrieve data
- (3) Telemetry
- (4) Video system
